Art Unit: 1634

## Election/Restrictions

1. Claims 2, 4-13, and 15-24 are subject to a restriction since these claims are not considered to recite a proper genus/Markush group.

Specifically, claim 2 recites methods for detecting distinct mutations in the biotinidase gene, wherein the mutations are selected from the group consisting of G98:d7i3, Q456H, R538C, D444H, and A171T. Each of these mutations occurs at a distinct nucleotide position in the biotinidase gene and has a distinct effect on the activity of the product encoded by the biotinidase gene. Given the differences in structure and function, the Markush group set forth in claim 2 is not considered to constitute a proper genus, and therefore is subject to a further restriction requirement.

Further, claims 4-13 and 15-24 recite methods requiring the use of distinct nucleic acid primer pairs, detection probes, and anchor probes, wherein the forward primer of the primer pair is selected from SEQ ID NO: 4-8, the reverse primer of the primer pair is selected from SEQ ID NO: 9-13, the detection probe is selected from SEQ ID NO: 19-23, and the anchor probe is selected from SEQ ID NO: 14-18.

Each of the primers and probes consists of a distinct nucleic acid sequence, has a different melting point, and binds to a different nucleic acid sequence, and thereby has a different biological function. Given the differences in structure and function, the Markush group set forth in claims 4-13 and 15-24 is not considered to constitute a proper genus, and therefore is subject to a further restriction requirement.

A sequence search and non-patent literature search of these mutations and primer and probes sequences would not be co-extensive with one another. For

Application/Control Number: 10/625,124

Art Unit: 1634

example, a search for methods which detect the G98:d7i3 mutation would not be coextensive with a search for methods which detect the Q456H mutation. Similarly, a
search for the nucleic acid sequence of SEQ ID NO: 4 would not be coextensive with a
search of the nucleic acid sequence of SEQ ID NO: 5. Further, a reference which
renders obvious or non-novel the primer of SEQ ID NO: 4 would not also necessarily
render obvious or non-novel the primer of SEQ ID NO: 5. Similarly, a finding that the
primer of SEQ ID NO: 4 is novel and unobvious over the prior art would not necessarily
extend to a finding that the primer of SEQ ID NO: 5 is also novel and unobvious over
the prior art. Accordingly, a search of more than one of the mutations and more than
one of the combinations of primers and probes presents an undue burden on the
Patent and Trademark Office due to the complex nature of the search and the
corresponding examination of more than one of the claimed sequences.

Therefore, Applicants are required to elect:

- a) one mutation selected from the group consisting of G98:d7i3, Q456H, R538C, D444H, and A171T
- b) one set of primers, one detection probe and one anchor probe, corresponding to the elected mutation. Note that this is not a species election.

Claims 1, 3 and 14 link the individual mutations and sequences of claims 2, 4-13 and 15-24, each mutation and sequence comprising a distinct invention as outlined above. The restriction requirement between the linked inventions is subject to the nonallowance of the linking claim(s). Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s)

Page 4

Art Unit: 1634

depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.0

- 2. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
- 3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. ₃ 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. 1.48(b) and by the fee required under 37 C.F.R. 1.17(h).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carla Myers whose telephone number is (571) 272-0747. The examiner can normally be reached on Monday-Thursday from 6:30 AM-5:00 PM. A message may be left on the examiner's voice mail service. If attempts to reach

Application/Control Number: 10/625,124 Page 5

Art Unit: 1634

the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones, can be reached on (571)-272-0745.

The fax phone number for the organization where this application or proceeding is assigned is (571)-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at (866)-217-9197 (toll-free).
